Medi-Secure

A blockchain network that can transform the face of health-related technology!

Main Aim of our Project

- ✓ Ownership of personal data
- ✓ Safety and security of your data with secure, decentralized platform for storing and controlling health data with blockchain technology
- ✓ Receive compensation for records research and medicine development

Case Studies

“Sharing health data can provide valuable insights into human health and disease, and can help to advance medical research and improve patient outcomes”

The Personalized Medicine Project

The goal of the project is to use genomics and other data to tailor medical treatments to the individual needs of patients.

This data is then used to develop personalized treatments and to advance our understanding of human health and disease

The Million Veterans Program

The program collects and shares data from over one million veterans, including information on their health status, medical history, and lifestyle habits. The data is used for research purposes, such as identifying risk factors for certain diseases and developing new treatments.

The UK Biobank Study

The study collects data from over 500,000 volunteer participants, including information on their health status, medical history, lifestyle habits, and genetic makeup. The data is used for research purposes, such as identifying risk factors for certain diseases and developing new treatments.

What different can we make in society ?

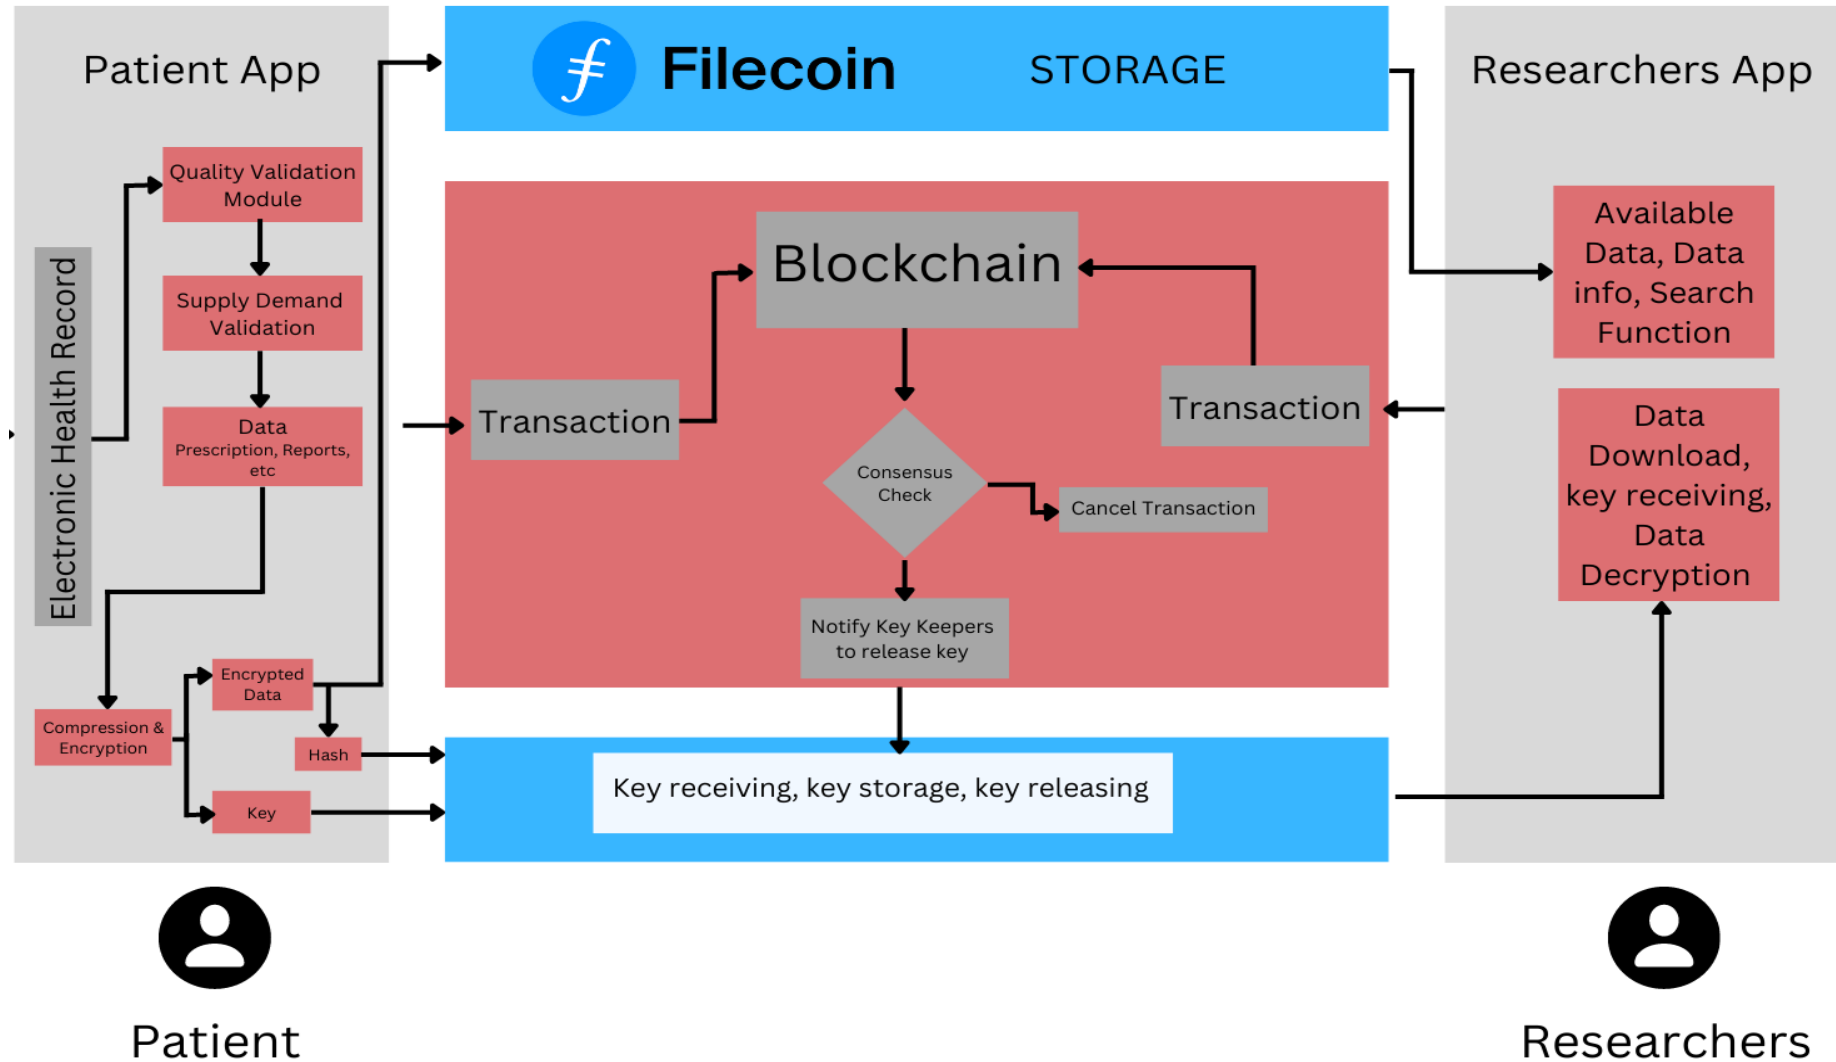

Current Challenge

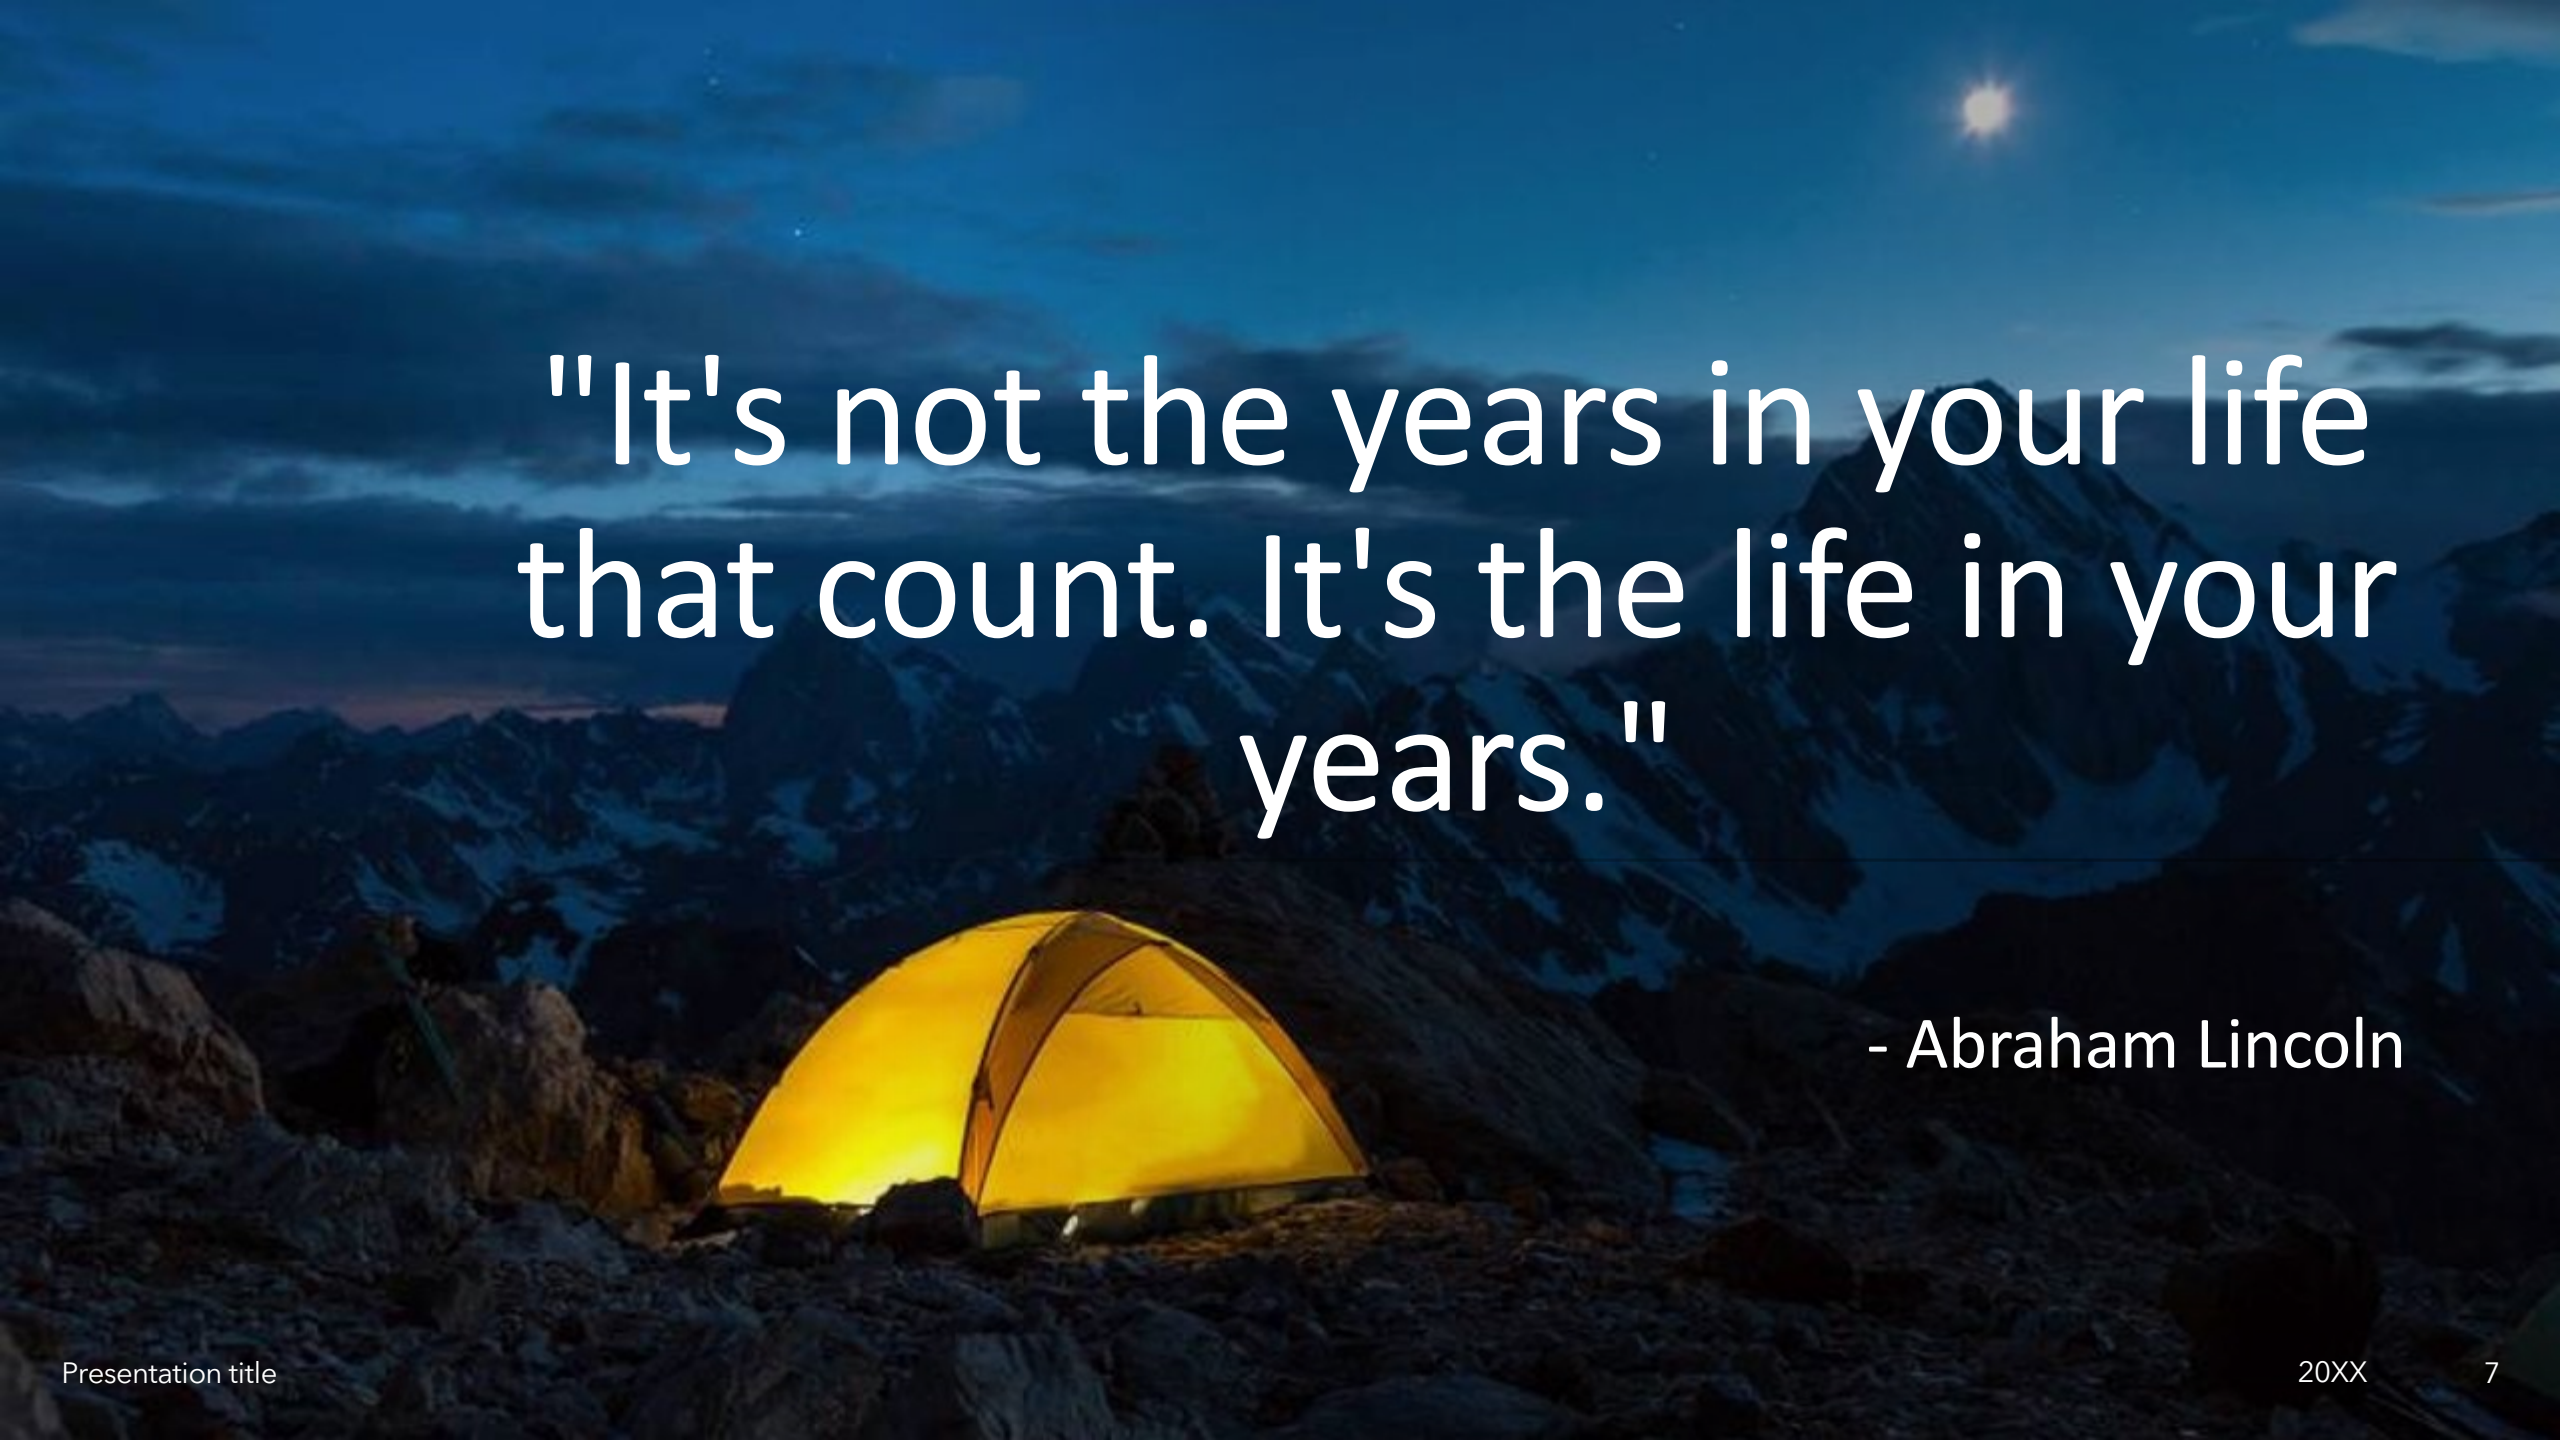

“One of the challenges in the medical industry is that health information is often siloed and cannot be easily shared between different healthcare providers. Blockchain technology can help to overcome this by creating a common platform for storing and sharing health information, making it easier for healthcare providers to access and share patient information.”

Our Mission

By breaking down these silos and creating a more integrated system for storing and sharing health information, blockchain technology has the potential to improve the overall quality of care for patients, reduce administrative burdens, and increase the efficiency and transparency of healthcare delivery.

System Design

A glowing yellow tent is pitched on a rocky mountain peak at night. The tent is illuminated from within, casting a warm yellow light. The background features dark, jagged mountain peaks and a deep blue sky with a few stars and a bright moon in the upper right corner.

"It's not the years in your life
that count. It's the life in your
years."

- Abraham Lincoln
